## GRAVITY FLOW CONVEYING EQUIPMENT

### 4B Lump Breaker

The 4B series of Lump Breakers is a simple and efficient way of breaking up material lumps which have compacted during transport or storage.

The Lump Breaker is easily integrated in to your feeding system, de-lumps and improves product flow. It can process a variety of materials, including chemicals, sugar, salt, lime, kiln dust, cereal, pasta, fertiliser and many more but is not suitable for crushing hard rock.

A direct coupled drive with counter rotating dual shafts breaks up compacted material between fingers and side combs for ease of conveying.

**Features:** Manufactured in Carbon Steel as Standard – Stainless Steel Optional.

Compact low – profile design.

Capacity: 15-35m<sup>3</sup>/Hr.
